Professional Summary

Third-year Computer Science student specialising in AI, cybersecurity, and full-stack development. Experienced in machine learning, algorithmic simulations, and secure system design. Delivered projects that optimise processes, enhance security, and provide measurable outcomes. Seeking graduate roles or internships to apply technical and analytical skills to real-world problems.

Education

BSc (Hons) Computer Science – University of Greenwich, London, UK

Expected Graduation: 2026

Relevant Modules: Data Structures & Algorithms, Artificial Intelligence, Machine Learning, Natural Computing, Information Security, Full-Stack Web Development, Software Engineering

Technical Skills

Programming Languages: Python • Java • Scheme

Web Development: HTML • CSS • JavaScript • React • Node.js • Bootstrap • jQuery

Machine Learning: Classification Models • Feature Selection • Model Evaluation

Algorithms & Optimisation: Graph Algorithms • Pathfinding • Swarm Intelligence

Databases: MySQL • SQLite

UI/UX Tools: Axure

Concepts: Human-Computer Interaction • Information Security • EU Digital Regulations

Version Control & Tools: Git • GitHub • VS Code • PyCharm

Projects

CineBloom – Movie Recommendation App

- Developed an interactive movie recommender using JavaScript and React; deployed full-stack web app with 90% positive user feedback.
- Implemented dynamic genre selection and responsive UI using Framer Motion.

Credit Card Fraud Detection Using ML

- Built machine learning models to detect fraudulent transactions; optimised classification algorithms to achieve high accuracy.
- Analysed feature importance and implemented model evaluation pipelines.

London TfL Route Simulation

- Designed graph-based simulation to analyse journey durations; implemented shortest-path algorithms to optimise routes.
- Improved route efficiency metrics through data-driven simulations.

NHS E-Consult Form

- Built secure patient-doctor communication system using Python and web technologies.
- Streamlined secure data submission and enhanced user experience.

Healthcare Cybersecurity Attack & Defence Model

- Analysed vulnerabilities in healthcare devices; designed attack graphs and proposed defence strategies.
- Contributed to system hardening recommendations.

Supermarket Checkout Lane System

- Simulated queues using Python & Scheme; optimised efficiency using data structures and algorithms.

Email Spam Detection Using ML

- Built and evaluated classification models for email spam detection.
- Conducted comparative analysis to improve detection performance.

Activities & Certifications

- Student Ambassador – University of Greenwich
- Participant – Oracle Technology Workshops
- Full-Stack Web Development Certification – India
Completed comprehensive program covering HTML, CSS, JavaScript, React, Node.js, Bootstrap, jQuery, and database management
